PROJECT REPORT

NAME - SHAGUN SHARMA

REGISTRATION NO. –25BAI10074

BRANCH - AIML

COURSE CODE - CSE0001

YEAR - 1ST YEAR

DATE - 25TH MARCH,2026

INTRODUCTION

This project is about learning the basics of literacy that we need in the world we live in today. It teaches us things like how to communicate online use online platforms create a professional presence and be aware of cybersecurity. The project has lots of work that helps us understand how to use digital tools in a good way. We do things like make presentations build profiles online learn to code work together with others write emails for work and learn about cybercrime. The goal is to get better at using technology and talking to people and to be safe when we are online. From this project I got to try out lots of tools and I learned why it is important to be careful, about what we do online. The digital literacy skills we learn in this project really help students become more confident when they use things and they learn to be responsible and aware of what they do online.

TASK 1

For Task 1,I made an infographic with Canva. The infographic was about literacy and safe internet practices and professional online presence. I put in things like using strong passwords and not clicking on suspicious links and keeping a professional profile online.
The infographic had words and pictures and was laid out in a way that was easy to look at. I liked using Canva because it was simple to use. Canva has templates. You can just drag things where you want them. I tried out colours, words ,layouts and elements to make it look good.
One hard part was getting all the information on one page without it looking too full.. This actually helped me get better at making things look good and picking the right information.

Overall doing this task helped me be more creative and understand how to show information in a way using digital tools like Canva and infographics, about digital literacy and professional online presence.

TASK 2

I have made profiles on GitHub, LinkedIn and Stack Overflow.
I use GitHub to share my code with others. I wrote a profile README that has information about my school and what I want to learn.
I am on LinkedIn because it is a place to meet people who work in my field. I put my school information on my LinkedIn profile. I am starting to build my professional identity.
Stack Overflow is a website where people ask and answer questions about programming.
Each of these websites is used for something. I use GitHub to show what I can do with code. I use LinkedIn to meet people and maybe find a job someday. I use Stack Overflow to learn from people who like programming.
Over the four years I will put my projects on GitHub. I will meet people on LinkedIn. I will talk to programmers, on Stack Overflow.

These websites will help me get better at programming gain experience and find a job when I am ready. I will use GitHub, LinkedIn and Stack Overflow to help me achieve my goals.

TASK 3

For Task 3, I have used HackerRank and Google Forms.

I did a beginner coding challenge on HackerRank. It helped me understand programming logic and problem-solving techniques. HackerRank was a starting point for improving my coding skills.

I have also made a Digital Literacy Awareness Quiz using Google Forms.

The quiz has five questions, like multiple choice and short-answer types. They were about safety and digital awareness.

I looked at the responses in Google Sheets. It showed me how easy it is to collect and analyse data. This task helped me learn skills in coding and collaboration.

HackerRank will help me get better at programming. Google Forms will be useful for surveys, quizzes and group projects.

These tools, HackerRank and Google Forms are important for work. They will also be helpful, in professional tasks.

TASK 4

When a student sends an email to a professor digital communication can be a problem if it is not done properly. For instance, if a student sends an email to a professor without a line or a proper hello or the message is not clear the professor might get confused about what the student wants. The professor might even ignore the email from the student. This can cause the student to miss deadlines or he/she can even get confused about what to do.

The student can make this situation better by doing things the way when sending an email. The student should use a line that makes sense be polite in the email to the professor and make sure the email is easy to understand. The student should also give the professor all the information they need and be professional in the email to the professor. I learned from this task that it is very important to communicate and be respectful when sending emails to professors in school and to people at work. Clear and respectful communication is important in environments and professional environments, like when a student sends an email to a professor.

.

TASK 5

While researching cybercrime, I was surprised to learn how common and easy UPI fraud and phishing attacks have become. Many scams are actually quite simple. Don't need advanced tech. They just trick people with WhatsApp messages, text messages, calls or links, I was amazed, at how you can lose money if you're not careful.

Because of this I'm going to be more cautious while using online platforms and reading messages. I'll be more careful when making payments or clicking on links. I will always check who is sending me a message and make sure everything looks right before I do anything. This will help me stay safe and avoid scams online. I will also try to raise awareness among people so that they can also be saved from such scams. These are some of the preventive measures we can adapt to avoid any type of scams.

CONCLUSION

This project helped me learn skills for using computers and the internet. These skills include talking to people staying safe on the internet and using online platforms.

I learned how to make presentations and create a profile on online platforms like LinkedIn, StackOverflow and GitHub. I understood why it is important to be polite in emails and careful when using media and any other social platforms. Another important thing that I have learned is about cybercrime and how to prevent it made me more aware of the risks, on the internet. I feel more confident now in using tools in a responsible way. This will help me in my studies, future work and help to shape my professional background. The project made me realize how important it is to use tools effectively and responsibly. I will definitely use these skills in my future professional life.
