PROJECT REPORT

NAME - SHAGUN SHARMA

REGISTRATION NO. –25BAI10074

BRANCH - AIML

COURSE CODE - CSE0001

YEAR - 1ST YEAR

DATE - 25TH MARCH,2026

INTRODUCTION

This project focuses on developing essential digital literacy skills required in today’s digital world. It covers key areas such as digital communication, online platforms, professional presence, and cybersecurity awareness. The project is based on practical tasks that help in understanding how to use digital tools effectively and responsibly. These tasks include creating presentations, building online profiles, practicing coding and collaboration tools, writing professional emails, and studying cybercrime. The aim is to improve both technical and communication skills while promoting safe online behaviour. Through this project, I gained hands-on experience with various tools and learned the importance of maintaining a positive digital footprint. Overall, this project helps students become more confident, responsible, and aware digital users.

TASK 1

For Task 1, I created an infographic using Canva. The design covered topics such as digital literacy, safe internet practices, and professional online presence. I included key points like the importance of using strong passwords, avoiding suspicious links, and maintaining a professional profile online. The infographic used simple text, icons, and a clean layout to make the information easy to understand and visually appealing.

Using Canva made the design process simple because of its templates and drag-and-drop features. I was able to experiment with colours, fonts, and layouts to create an engaging visual. One challenge I faced was organizing all the information within a single slide without making it look crowded. However, this helped me improve my design and content selection skills. Overall, this task enhanced my creativity and helped me understand how to present information effectively using digital tools.

TASK 2

In this task, I created profiles on GitHub, LinkedIn, and Stack Overflow. GitHub is used for managing and sharing code, and I created a profile README with my academic details and learning goals. LinkedIn is a professional networking platform where I added my education details and began building my professional identity. Stack Overflow is a platform for asking and answering programming-related questions.

Each platform serves a different purpose. GitHub helps in showcasing technical skills, LinkedIn helps in networking and career growth, and Stack Overflow supports learning through community interaction. Over the next four years, I plan to upload projects on GitHub, build professional connections on LinkedIn, and actively participate in discussions on Stack Overflow. These platforms will help me improve my skills, gain experience, and prepare for future job opportunities.

TASK 3

For Task 3, I used HackerRank and Google Forms. On HackerRank, I completed a beginner-level coding challenge, which helped me understand basic programming logic and problem-solving techniques. It was a good starting point for improving my coding skills.

I also created a Digital Literacy Awareness Quiz using Google Forms. The form included five questions, such as multiple-choice and short-answer types, focusing on online safety and digital awareness. I then viewed responses in Google Sheets, which showed how data can be collected and analysed easily.

This task helped me learn practical skills in both coding and collaboration. HackerRank will help me improve my programming abilities, while Google Forms will be useful for surveys, quizzes, and group projects. These tools are important for academic work and will also be helpful in future professional tasks.

TASK 4

A situation where poor digital communication can cause problems is when a student sends an unclear or impolite email to a professor. For example, if the email does not include a subject line, proper greeting, or clear message, the professor may misunderstand the request or ignore the email. This can lead to missed deadlines or confusion.

This situation could be improved by following proper email etiquette. Using a clear subject line, polite tone, and structured content makes communication more effective. It is also important to provide complete information and maintain professionalism. This task helped me understand the importance of clear and respectful communication in academic and professional environments.

TASK 5

While researching cybercrime, I was surprised to learn how common and easy UPI fraud and phishing attacks have become. Many scams do not involve advanced technology but instead rely on tricking people through fake messages, calls, or links. It was surprising how quickly money can be lost if a user is not careful.

As a result, one habit I will change is being more cautious before making online payments or clicking on links. I will always verify the source and double-check details before taking any action. This will help me avoid scams and stay safe online.

CONCLUSION

This project helped me develop important digital literacy skills, including communication, online safety, and use of digital platforms. I learned how to create presentations, build a professional online presence, and use tools like GitHub, LinkedIn, and Google Forms. I also understood the importance of email etiquette and responsible social media use. Learning about cybercrime and its prevention made me more aware of online risks. Overall, this project improved my confidence in using digital tools effectively and responsibly, which will be helpful for my academic and professional future.
